Health care →

Pure water for direct drinking, making soup, cooking makes food sweeter and more delicious.

← Skin care

Washing your face and taking a bath with softwater can deeply clean your skin, reduce the damage caused by hardness to the skin, prevent dryness and atrophy.

Clothing care →

Soft water for laundry not only cleans more thoroughly but also makes clothes soft and keeps their colors as fresh as new. Each wash can save about half of the detergent. Soft water is less likely to form scale and can also reduce equipment malfunctions.

← Water appliance care

Soft water used for laundry delivers more thorough cleaning, keeps fabrics soft, and preserves vibrant, fresh-like colors. It reduces detergent consumption per wash. In addition, soft water minimizes limescale buildup and lowers the risk of appliance breakdowns.

Energy saving →

The water heater will not form scale, remaining clean and energy-efficient.
